

SECURE FUELING

Challenges

Fleets are vulnerable to fuel theft, unauthorized usage, and inefficient fuel management, leading to financial losses, operational disruptions, and potential regulatory compliance issues.

Solution Overview

AssetWorks GPS offers a single device that enables fueling security by seamlessly integrating with FuelFocus, leveraging its unique identification and vehicle data functionalities. Through real-time alerts, fleets can validate fueling events, enabling instant detection of suspicious activities such as fueling outside designated hours or over fueling. AssetWorks GPS provides accountability and protects against potential losses from unauthorized fueling.

Key Features

- Integration with Fuel Management Software
- Provides accurate meter readings through the GPS device
- GPS Tracking
- Fuel level monitoring
- Fuel transaction logging
- Driver identification
- Real-time alerts and notifications
- Geofencing

Benefits

Improve Maintenance Strategies

Tracking fuel consumption and vehicle performance, AssetWorks GPS can identify potential vehicle issues, improving maintenance schedules and reducing downtime.

Reduce Costs

Using a single device for both fuel and GPS/telematics reduces costs of hardware and installation. Over the air programming eliminates hands-on device management and maintenance costs.

Remote Fuel Management

With AssetWorks GPS and FuelFocus integrated, managers can monitor and manage fuel activities offsite from the fuel station.

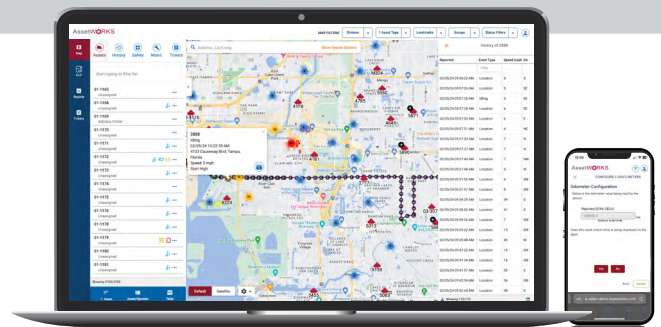

Enhance Security

When integrated with FuelFocus, GPS provides real-time visibility into fueling activities, reducing the chances of fuel theft and unauthorized usage.

Resolve OBD-II Port Sharing Challenges

OBD-II port sharing conflicts are a thing of the past with AssetWorks GPS single device secure fueling and GPS/telematics solution.
